PRECISE TECHNICAL SCALES BTA series

BTA series precise technical scales are intended for wide use in laboratories, production control, sorting plants, etc. Aesthetic design and easy handling are their primary advantages. Despite their small size and low price, these scales ensure high weighing accuracy required in practice.

A ring surrounding the pan (BTA 210 and BTA 210D) protects it against air flows and allows comfortable measuring in normal conditions. When air flows are stronger, draft shield (option) should be used.

The scale has numerous special functions: automatic reset, calculation in changed mass units (ct, lb, oz and ozt), counting identical pieces, calculation of percentage mass changes, recipe making, remembering entered tare weight, etc.

RS232C interface allows connecting a computer or a printer for printing notes, reports or for archiving weighing results on the computer.

Scale can be powered by rechargeable batteries, charged during on the external power supply. Non-rechargeable batteries can be used with charge function switched-off.

Communication and *Procell* computer software available on website *www.axis.pl* support user's work, enabling the direct entering of weighing results in the Excel spreadsheet or saving them in a text file.

The scales satisfy requirements of the European Union regulations and are marked with the CE sign on the proprietary nameplate.

Options on demand:

- NiMH accumulators or batteries (AA size) 4 pieces
- USB interface for computer connection
- draft shield
- 10 tares memory, animal weighing, Max/Min value indication
- other special functions: internal clock, checkweighing (Min/Ok/Max), summing results of weighing series
